Arthur Silva Carneiro

FULL-STACK & AI ENGINEER | REACT, NODE.JS, TYPESCRIPT, LLMS

Brasília, Brazil (UTC-3) · Open to remote work
Phone: +55 61 99967-6770 | E-mail: tutuscarneiro@gmail.com | LinkedIn: https://www.linkedin.com/in/arthur-carneiro-dev | GitHub: https://github.com/Silva015 | Portfolio: https://arthurcarneiro.vercel.app

ABOUT

Full-Stack & AI Engineer and Computer Science student at the University of Brasília (graduating Dec 2026), building web and mobile products since 2021. I build systems with React, React Native, Next.js, NestJS, Node.js and TypeScript, and integrate LLMs and AI agents to replace slow, manual workflows. I led engineering for Tempo, an AI planning assistant, with a fully remote, multinational team (PM Accelerator, US) and co-founded an app that reached 1,100+ users with a 5-star rating. English C1 (Cambridge CAE). Open to Full-Stack and AI Engineering roles, especially remote positions with international teams.

SKILLS

Languages: TypeScript, JavaScript, Python, Java, C/C++, SQL and Ruby.

Web & Mobile: React 19, Next.js, React Router 7 (SSR), React Native (Expo/EAS), Node.js, NestJS, Ruby on Rails and REST APIs.

AI & Data: LLM integration, AI agents, generative AI and prompt engineering, n8n automations, machine learning (KNN and neural networks), NLP, Python (matplotlib, ReportLab) and Power BI.

Databases & Infrastructure: MongoDB, Prisma, PostgreSQL, DBeaver, Docker, GitHub Actions (CI/CD), AWS, pnpm monorepos and Git.

Practices: Domain-Driven Design (DDD), documentation-driven development, AI-assisted engineering with coding agents (agent-ready specs, CLAUDE.md), Scrum/Kanban and Figma prototyping.

Soft Skills & Business: team leadership, MVP design and management, async remote collaboration, business vision and communication with executives and clients.

EXPERIENCE

Quattor Academia | Full-Stack Developer & Front Desk Coordinator | *01/2026 – Present*

- Building the gym's management platform, which is replacing its third-party SaaS (EVO), with React 19, React Router 7 (SSR), TypeScript, Node.js, Prisma and MongoDB: trial classes, cancellations with fees, retention, sales, reports and class schedules.
- Integrated the EVO REST API and the WhatsApp API (Evolution API) to automate trial-class booking, with automated notifications, plus a retention bot for inactive members scheduled via n8n.
- Built an attendance leaderboard for the lobby TV from facial-recognition turnstile logs; cut image weight by 75% and API payload by 80% so it runs 24/7 on a low-end TV box.
- Set up a pnpm monorepo, Docker and GitHub Actions CI/CD (~125 commits, 25+ merged pull requests); work with coding agents daily and write agent-ready specs (CLAUDE.md) for the EVO migration roadmap.
- **Impact:** built a data pipeline (MongoDB aggregations + Python) behind a 2023–2026 revenue analysis for the directors (churn, renewals, receivables, seasonality), and coordinate the sales team with monthly goals and weekly pace reports.

Product Manager Accelerator | Lead AI Engineer Intern (US, remote) | *04/2026 – 09/2026*

- Served as Lead Engineer in two consecutive cohorts of the 11-week AI Product Management Bootcamp, leading engineering for Tempo, an AI planning assistant that turns a weekly "brain dump" (typed or dictated) into a realistic calendar plan.
- Designed the solution with Domain-Driven Design (DDD) and a documentation-driven approach, translating the PM's vision into a domain model before writing code, and used AI agents throughout the development workflow.
- **Impact:** delivered a working MVP in 1 week and took the product to launch-ready state, collaborating asynchronously with a multinational team across time zones.
- **Recognition:** Tier 1 "AI Trailblazer" award, Certified AI Engineer certification and two letters of recommendation from founder Dr. Nancy Li.

MeuEduca | Full-Stack Developer & AI Integrator | *08/2025 – 07/2026*

- Rebuilt the web platform (Next.js & NestJS) that automates administrative work for primary school teachers (K-5), taking the project from a fragmented codebase to a market-ready MVP.

- Integrated generative AI to turn structured student data into personalized pedagogical reports, cutting writing time from hours to seconds.
- **Impact:** led a full UI/UX redesign, refactoring legacy code and resolving critical bottlenecks, and built student performance tracking with AI-powered intervention suggestions, preparing the platform for commercial launch.

GymGames (Startup App) | Co-founder & Mobile Developer | *01/2024 – 05/2026*

- Led the product end to end, from a WhatsApp-based prototype and Figma designs to an app live on the App Store and Google Play, built with React Native (Expo), NestJS and AWS and shipped through an Expo EAS pipeline.
- Built the "Squad vs. Squad" gamification engine that boosted daily engagement and retention.
- **Impact:** scaled to 1,100+ organic users with a ~50% active-user rate and a 5-star rating on both stores.
- **Impact:** sold and implemented the B2B MVP for three junior enterprises, validating product-market fit.

Banco do Brasil | IT Intern (People Directorate – DIPES) | *05/2024 – 12/2024*

- Modernized the internal employee expatriation system (Java/JSP, MVC), prototyping new interfaces and connecting it to dozens of corporate databases via DBeaver.
- **Impact:** delivered Power BI dashboards with the team, automating the extraction and formatting of complex datasets for management decisions.

Junior Computer Enterprise (CJR – UnB) | Talent Leader (elected) / Coordinator / Full-Stack Developer | *03/2021 – 12/2023*

- Full-Stack Developer (React, Ruby on Rails, Node.js, TypeScript); worked on the frontend of "Selo Social", a modernization of a national certification system aligned with UN guidelines and the main driver of the company's record revenue.
- Elected Talent Leader (HR) in 2023, managing a 14-person department; previously coordinated Member Management (2022) with a team of 3.
- **Impact:** led the largest recruitment drive in the company's history (86 candidates), implemented Individual Development Plans (IDPs) and funded 100% of the team's trip to the National Junior Enterprise Event (ENEJ).

EDUCATION & RESEARCH

University of Brasília (UnB) | B.Sc. in Computer Science | *2021 – Dec 2026 (expected)*

- **Thesis:** machine learning models (KNN, benchmarked against neural networks) applied to a forensic ballistics dataset to classify gunshot wounds (entry/exit) and estimate shooting distance. Accepted as a poster at SIBGRAPI 2026 (Workshop of Undergraduate Works).
- **Key coursework:** Natural Language Processing (NLP), Data Structures & Algorithms and Software Architecture.

LANGUAGES, CERTIFICATIONS & AWARDS

- Portuguese (native) · English (advanced), C1 Advanced (CAE) — Cambridge English.
- Certified AI Engineer and Tier 1 "AI Trailblazer" award — Product Manager Accelerator.
- NLW Expert (React Native track) and React Native Fundamentals.
